

M HARESH KUMAR

DATA ANALYST & SYSTEMS AUTOMATION SPECIALIST

Email: hareshmkumar9@gmail.com | Portfolio: LeadGenData.github.io/portfolio | Location: Remote / India

PROFESSIONAL SUMMARY

Analytical and automation-focused Data Specialist with 14 years of operational leadership and hands-on data hygiene management. Proven track record of managing high-performance data validation teams (up to 15 members), overseeing large-scale databases (10M+ cumulative records), and successfully migrating legacy spreadsheets into automated cloud pipelines. Technical proficiency in SQL, Snowflake (Medallion streams/tasks), Power BI, Google Apps Script, and Cloudflare Workers proxying.

TECHNICAL COMPETENCIES

Data Warehousing & BI:

- Snowflake Medallion (Bronze/Silver/Gold)
- SQL Data Modeling (Star/Snowflake Schemas)
- Power BI (DAX, Power Query/M)
- Relational Databases (Oracle, T-SQL, DDL/DML)

Automation & Development:

- Google Apps Script (Custom REST APIs)
- Cloudflare Workers (CORS & Endpoints proxy)
- Scripting (Python, PowerShell Core)
- Development tools (React, Vite, Git, CLI)

PROFESSIONAL EXPERIENCE

Data Operations Manager | Blue Data Labs (BDL)

2012 – Present

- Led a 15-person data operations team responsible for sourcing, validating, cleaning, and delivering B2B contact lists and lead datasets across multiple sectors.
- Handled massive databases, scaling operational storage and hygiene protocols to manage over 10 million records.
- Rebuilt legacy workflow infrastructure, moving the company from manual spreadsheet work (which took hours) to serverless automation pipelines using Apps Script and Cloudflare Workers, decreasing delivery cycle times by 80%.
- Built customized Power BI dashboards and executive reports, connecting database results directly to the C-suite for revenue analysis and lead tracking.
- Implemented dynamic data masking and role-based access policies in SQL databases to secure customer PII and maintain strict quality compliance.

Systems & Automation Lead (Freelance Portfolio) | Personal Projects

2024 – 2026

- Developed custom API endpoints on Cloudflare Workers and Apps Script for secure, serverless database intakes.
- Designed automated client-side math audit engines connected to backend document compilation (generating unredacted 6-page PDF plans on-the-fly) and automatic Day 2/Day 5 email drip notifications.
- Deployed fully functional React-based CRM client consoles for tracking customer statuses, managing follow-up alerts, and visualizing team outreach performance.
